ABSTRACT

This is an example of the `active-conf-2006` class, with brief instructions that are in the format that should be followed by authors in preparing their papers, which must be submitted as PDF documents. Inclusion of an abstract in the final paper is required, and must contain 200 words or less (that's at most around thirteen lines of text as typeset right here), and should not include equations, numbered references or footnotes. These abstracts will be printed in the conference program to help attendees plan their days at the conference. The Organizing Committee may alter abstracts printed in the final program to bring them into compliance with the word limit.

1 ABOUT THE ARTICLE

The manuscript should be a contribution to the active noise and vibration control literature, and not as a list of topics to be covered during the oral presentation. All papers are expected to be 8–12 pages in length (including figures, tables, and illustrations). All papers submitted to this conference will be peer reviewed by the scientific committee. The members of the scientific committee are listed on the Active 2006 web site, <http://www.active2006.com>.

2 MANUSCRIPT FORMAT

Refer to the class documentation, `Active_2006_LaTeX_Docs.pdf`, for full details on the features of this class. *Please* only capitalise the first word of the title of the paper.

3 TABLES AND FIGURES

Please incorporate all graphics, charts, tables, illustrations, photos, etc. into your manuscript as you would like them to appear in the final published paper. An example of a floating figure is shown in Figure 1.

Figure 1: This is an example of a figure. Note the caption is *below* the figure.

The authors acknowledge the support of a research grant.

The second author now works in Antarctica.

^aEmail address: `first@author`

^bEmail address: `third@secondaddress`

Tables and figures have some nice features to make them easier to use. Refer to Figure 1 and Table 1 for examples. (Note the use of `\figref{...}` and `\tabref{...}` in the previous sentence.)

Table 1: This is an example of how you should tabulate data. Note that the caption is placed *above* the table.

Item		
Animal	Description	Price (\$)
Gnat	per gram	13.65
	each	0.01
Gnu	stuffed	92.50
Emu	stuffed	33.33
Armadillo	frozen	8.99

4 MATHS

For your convenience, the `amsmath` and `amssymb` packages are loaded automatically, among others. Equation 1 gives an example of an equation, and this sentence gives an example of the `\eqref` command.

$$\begin{bmatrix} f_0[k+1] \\ f_1[k+1] \\ \vdots \\ f_{N-1}[k+1] \end{bmatrix} = (1 - \lambda) \begin{bmatrix} f_0[k] \\ f_1[k] \\ \vdots \\ f_{N-1}[k] \end{bmatrix} - \mu \begin{bmatrix} r_f[k-0] \\ r_f[k-1] \\ \vdots \\ r_f[k-(N-1)] \end{bmatrix} e[k+1] \quad (1)$$

When referring to units and numbers with units, use the `\unit{}` and `\num{ }{ }` commands, respectively. Their use is shown in the following examples: ‘The unit of acceleration is m/s^2 ’ and ‘The peak velocity of the oscillation was 123 m/s ’.

5 NOTES ON PDF FILE GENERATION

If you are using a current version of `pdflatex` your PDF file should be correct and include the appropriate font information to display correctly on screen and in print. However if you are using the `latex->dvi`, `dvips->ps`, `ps2pdf->pdf` method ensure that you use the following options so that the resulting PDF will display correctly on screen

```
latex input_file.tex
dvips -Ppdf -GO -t a4 -o output_file.ps input_file.dvi
ps2pdf output_file.ps output_file.pdf
```

Check the man pages of `dvips` for more information or use Google to find out more.
